Kentucky Dept. for Libraries and Archives

December 2021

How to Access: kdla.ky.gov

The screenshot shows the homepage of the Kentucky Department for Libraries and Archives. At the top, there is a blue header with the 'Ky.gov' logo and the text 'An Official Website of the Commonwealth of Kentucky'. A search bar is located in the top right corner. Below the header is the main title 'Kentucky Department for Libraries and Archives' with a blue logo. A navigation bar contains five dropdown menus: 'Librarians', 'Archivists', 'Researchers', 'State Employees', and 'Records Management'. The 'State Employees' dropdown menu is open, showing a list of links. The link 'Research Databases' is circled in red. Below the navigation bar is a large quilt image with the text 'Kentucky's 2020 census quilt arrives at its final destination' and a 'Click to learn more' link. To the right of the quilt is a text block starting with 'The State Libraries, Archives, and Records Commission advises the Department for Libraries and Archives on matters relating to federal and state library development issues, archives and records management, federal and state funding, public library standards, and other federal and state library and archival service issues.' Below this text is a link 'Click for more information'. At the bottom left is a 'Notice' section with text about the Kentucky State Archives' Research Room reopening. At the bottom right is a 'READ Poster Project' section with a small image of a person.

Zombie spiders and ecdysone: manipulation of *Allocyclosa bifurca* (Araneae: Araneidae) behavior by a parasitic wasp

William G. Eberhard

Author Affiliations +

The J. of Arachnology, 49(2):250-252 (2021). <https://doi-org.kdla.idm.oclc.org/10.1636/JoA-S-19-046>

Abstract

In previous studies, the “cocoon” webs built by spiders of the genera *Cyclosa* Menge, 1866 and *Allocyclosa* Levi, 1999 under the influence of *Polysphincta* spp. wasps resembled molting webs built by unparasitized spiders; this behavioral manipulation was associated with increased concentrations of the molting hormone ecdysone. The present study documents an additional aspect of the cocoon webs of *Allocyclosa bifurca* (McCook, 1887) built under the influence of the wasp *Polysphincta gutfreundi* Gauld, 1991. Molting webs were more likely to have an associated barrier web than were prey capture orbs; and cocoon webs were even more likely to have barrier webs. The similarity between molting and cocoon webs accords with previous indications of ecdysone use by the wasps. The accentuation of molting web traits in the cocoon webs (also seen in other species) implies that the wasps manipulate the spiders using mechanisms other than simply replicating hormonal stimuli involved in normal molting.
