The Kentucky Talking Book Library offers expanded eligibility for those with reading disabilities.
The Kentucky Talking Book Library offers expanded eligibility for those with reading disabilities.
Research Databases for State Employees

Desktop access to licensed databases is provided free of charge, exclusively to state government employees. All databases are accessible to the general public at the State Library.

JSTOR provides access to more than 12 million academic journal articles, books, and primary sources in 75 disciplines.

3000+ full-text U.S. newspapers; 50+ Kentucky sources including the Lexington Herald-Leader.

160 subject areas, from Business and Economics to the Arts. Full-text scholarly journals/magazines and hundreds of newspapers including the Courier-Journal.

BioOne Complete

Search more than 200 leading titles in the biological, ecological, and environmental sciences.

Login Procedure

- Select a database.
- When prompted, type in your KDLA account number and password.
- NOTE: Our login procedure has changed and you may be required to reset your password. The following short video will walk you through that process: [How to reset your KDLA library account for WorldCat Discovery and KDLA Databases (5 minute video)]
- For assistance contact the State Library’s Reference Desk: 502.564.8306; or toll-free 800.928.7000; or online at [Ask A Librarian].

Temporal changes in taxonomic and functional diversity of fish assemblages downstream from mountaintop mining

Nathaniel P. Hitt, Douglas B. Chambers

*Freshwater Science, Vol. 33, No. 3 (September 2014), pp. 915-926*

Mountaintop mining (MTM) is a surface mining technique that exposes coal seams for extraction by disposing of overburden, soil, and rock layers in adjacent valleys (valley fills). MTM requires construction of valley fills and may lower mountaintop elevations by as much as 300 m (USEPA 2011b). This mining...

The Application of Prescribed Fire and Herbicide to Reduce Pennsylvania Sedge (Carex pensylvanica) Cover at the Newayo Prairies Research Natural Area, Manistee National Forest, Michigan

Todd A. Aschenbach (corresponding author: Natural Resource Management Program, Department of Biology, Grand Valley State University, Allendale, MI, 49401, aschentb@gvsu.edu) and Pat Ruta McGhan (U.S. Forest Service, Manistee National Forest, Baldwin, MI, 49304).

Sand and prairie is part of Michigan’s historic oak-pine barrens ecosystem and once covered approximately 5,000 hectares in northern Lower Michigan in the early to mid-1800s. Dominant plant species include Pennsylvania sedge (Carex pensylvanica), little bluestem (Schizachyrium scoparium), and big bluestem (Andropogon gerardii). Unfortunately, sand prairie has been largely eliminated due to agriculture, reforestation, and fire suppression. Today, approximately 4% of the original extent of sand prairie remains in the state (Kost 2004, Cohen et al. 2015). Similarly, species that depend on these ecosystems such as the federally endangered Karner blue butterfly (Lycaenides melissa samuelis) have also suffered considerable losses (USFWS 1992). Fire suppression has allowed Pennsylvania sedge to dominate the understory of degraded oak-pine barrens and sand prairies and represents a major obstacle for restoration of these areas (Abrams et al. 1985, Nielsen et al. 2003).

Restoration of sand prairie has the potential to help return floral and faunal diversity and ecosystem function to degraded landscapes in the Manistee National Forest, Michigan. The return of prescribed fire may help decrease the cover of Pennsylvania sedge in areas designated for sand prairie restoration. However, little research has been done on the response of Pennsylvania sedge to fire. Previous workers have found that returning fire to fire-suppressed areas may actually result in a modest increase in Pennsylvania sedge cover (Abrams et al. 1985, Nielsen et al. 2003). Although limited, these results indicate that fire alone is at least insufficient at reducing the dominance of this species.

Other common management approaches such as the application of herbicide may be important in reducing Pennsylvania sedge. Only limited research has been conducted on the response of Carex spp. to herbicide (e.g., Campbell and Burbidge 1993, Ristau 2010), while the response of Pennsylvania sedge to herbicide in particular has not been evaluated. Further, the use of prescribed fire in conjunction with herbicide application has not been evaluated.

Our primary objective was to determine how effectively we could reduce the dominance of Pennsylvania sedge on degraded grasslands in the Manistee National Forest, MI through the use of fire and herbicide applied singly and in combination. We also evaluated the response of the native and non-native plant community to Pennsylvania sedge reduction.

The study area is located within the Newayo Prairies Research Natural Area and Newayo Experimental Forest in the Manistee National Forest, Newayo Co., MI. The experiment is conducted on degraded grassland in three separate management units within the study area. Five treatments of prescribed fire and herbicide application were implemented in each management unit to reduce Pennsylvania sedge cover and biomass: fire followed by herbicide, fire only, herbicide only, herbicide followed by fire, and no fire or herbicide (control). Prescribed fire was applied to the fire and fire herbicide plots on June 4, 2013 by US Forest Service personnel. Glyphosate was applied to herbicide and herbicide fire plots on June 4, 2013 and to the fire herbicide plots on June 27, 2013. Herbicide was applied with a backpack sprayer at a rate of 1.8 kg a.i./ha (based on control of Carex spp. by Campbell and Burbidge 1993, Ristau 2010). Prescribed fire was applied to the herbicide fire treatment plots on September 4, 2013.

Changes in post-treatment plant community diversity were evaluated by evaluating 25 1-m² subplots within each treatment in each management unit for a total of 375 subplots. Each subplot was randomly located within each treatment plot. Species richness and cover were determined...

American Prison Newspapers, 1800-2020: Voices from the Inside

On March 24, 1800, Forlorn Hope became the first newspaper published within a prison by an incarcerated person. In the intervening 200 years, over 450 prison newspapers have been published from U.S. prisons. Some, like the Angolite and the San Quentin News, are still being published today. American Prison Newspapers will bring together hundreds of these periodicals from across the country into one collection that will represent penal institutions of all kinds, with special attention paid to women's-only institutions. Development of the collection began in July 2020 and will continue through

Search Castle on the Cumberland
The new educational building at ESP is nearing completion, and should be ready for use in the very near future. The building is being constructed under the supervision of Martin Linder Hanson and Mr. Andri Heil, an actual independent contractor. The majority of the labor was performed by inmates, directly resulting approximately $100,000.

The first floor will consist of a 30' x 50' library. There will be eight class rooms, each measuring 20' x 25'. The selected in private of those rooms will be a definite advantage over the old "cage" system presently being used.

The school superintendent's office will measure 15' x 25' and will be adjacent to another office of the same size. The other end of the building the mechanical equipment room will be located. It measures 15' x 10' x 8'.

A 4' railway will run parallel with the classrooms, allowing for easy and safe traffic from class to class.

On the second floor the auditorium is located. There will be ample room for sports as well as areas measuring 30' x 70'. A basketball court has been painted on the floor and we hope to have some interesting and exciting games in the near future.

The stage is located at one end of the auditorium, and measures 20' x 15' where clear vision should be enjoyed by all. In this stage, the movie screen is to be located. I understand it is to be a wide range vision screen.

There are two sets of bleachers on each side of the building. Each section contains 150 seats. If my arithmetic is correct, 750 men should be able to be seated. Provision has been made for extra seats as well. I presume this to mean that chairs will be available.

-8-

While walking around the "Mill" the other day, I noticed a few of the native "natives" engaging in some strange behavior. For instance, the usual self-talking of Billy Brittle, a little dumpy fellow who always talks to himself. The serious look of Larry Penhale, and Jerry. The constant opinions of John Barry, and the imposing Charlie Baker. What are the roles for Ben Blakely? I see that the 600 rpm driving of Chester Melvin & Ray Vickers, how about that Sea Irwin, are they going to win it? Have you noticed the occasional voice of Little Doug Kestee? Then there’s that affable little guy with the pinch nose and ready smile for everybody - Senor and his shades. The high intellectual conversations of Jack Damien, James Fox, Alvin Loomes, and company. The unmistakable Al Mitchell, and last but not least, my friend the Chief, keep walking till.
