

**The Original**

# Majic Bubble Wand®

Made in America and sold around the world, the Majic Bubble Wand is made out of heavy duty polypropylene for flexibility and long life.

## The Secret Bubble Wand Recipe

- 11 Cups water
- 4 Cups Ajax dish soap\*
- 1 Cup corn syrup

This recipe will fill up a one gallon milk or water jug perfectly, and will last a long time if kept cool. Gently mix before using.

To make smaller portions, just remember to use the ingredients proportionally.

\*Ajax anti-bacterial is currently the best soap, however Joy or Dawn dish soap has worked well too. You may have to experiment to find what works the best in your climate, but when in doubt try to find Ajax!

## Bubbling Tips

- If the wand head is a little hard to slip on, dip handle in hot water first.
- Keep mix in a cool place if possible.
- When making bubbles, try not to stir or foam the mix up with the wand. If lots of foam accumulates on dipping dish, you can scrape it off with a piece of cardboard.
- Wave wand against face of wand head, like a tennis racket.
- If the air is very hot and the bubbles are popping quick, add a little water to the bubble mix, in general bubbles should be lasting over a minute using this recipe.
